12. Power On Sequence

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below

- 0 < T1 ≤ 10 ms
- 0 < T2 ≤ 50 ms
- 200 ms ≤ T3
- 0 ms≤ T4, 0 ms≤ T5
- 0 ≤ T6 ≤ 10ms
- 150ms ≤ T7
- Note 12-1: When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance.
- Note 12-2: Do not keep the interface signal high impedance when power is on.
- Note 12-3: Back Light must be turn on after power for logic and interface signal are valid.

Note 13-1: Topcon BM-5A or BM-7 fast luminance meter 1°field of view is used in the testing.

Note 13-2: The definitions of viewing angles are as follow

Note 13-3: The definition of contrast ratio $CR = \frac{Luminance when Testing point is White}{Luminance when Testing point is Black}$

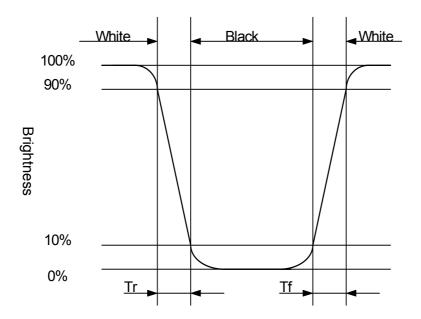

Note 13-4: The "LED Life time " is defined as the module brightness decrease to 50% original Brightness that the ambient temperature is 25° C and I_{LED} =360mA.

As the performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.

Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

Note 13-5: Definition of Response Time Tr and Tf

Note 13-6: The uniformity of LCD is defined as

U = The Minimum Brightness of the 9 testing Points

The Maximum Brightness of the 9 testing Points

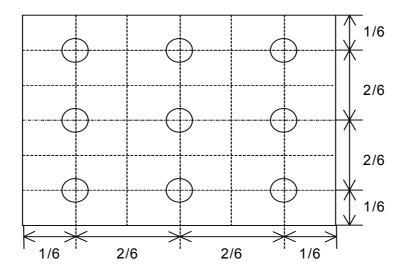

Luminance meter: BM-5A or BM-7 fast (TOPCON)

Measurement distance: 500 mm +/- 50 mm

Ambient illumination: < 1 Lux

Measuring direction: Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

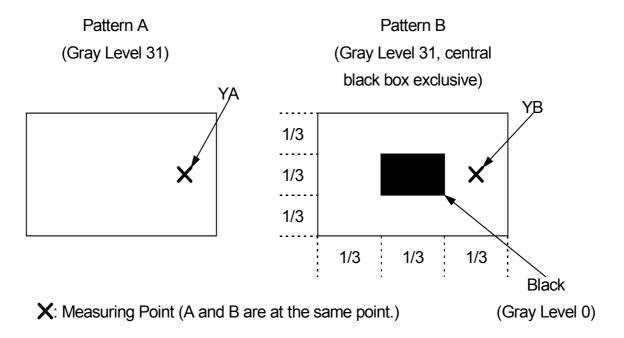

Note 13-7: Cross Talk (CTK) = $\frac{|YA-YB|}{YA} \times 100\%$

YA: Brightness of Pattern A YB: Brightness of Pattern B

Luminance meter: BM 5A (TOPCON)
Measurement distance: 500 mm +/- 50 mm

Ambient illumination: < 1 Lux

Measuring direction: Perpendicular to the surface of module

14. Handling Cautions

14-1) Mounting of module

- a) Please power off the module when you connect the input/output connector.
- b) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- c) Protective film (Laminator) is applied on surface to protect it against scratches and dirt.
- d) Please following the tear off direction as figure 14-1 to remove the protective film as slowly as possible, so that electrostatic charge can be minimized.

14-2) Precautions in mounting

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

14-3) Adjusting module

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

14-4) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.
