

Drop In Replacement

AGDisplays Value Add Service

Introduction

Drop in replacement service is for customers who need to replace an LCD when their original panel is unavailable or for customers who are looking for a cost effective, suitable alternative for their existing LCD.

If you've received an end of life (EOL) notice from an OEM alerting you that your part will cease production, AGDisplays sources these products for you or will simply source an equivalent replacement.

A drop in replacement unit extends the lifecycle of your unit in the case of EOL, damaged or unavailability of original parts. Using a replacement does not compromise on quality and compatibility and we ensure they are a top priority.

About Drop In Replacement

Why Drop In Replacement?

- Alternative panel with same specifications to replace the panel in your equipment
- Products are matched for compatible integration without compromising quality
- Continuity of supply verified for steady demand, if needed
- Our International Procurement Office in China verifies resources and quality of the companies we do business with
- Secure list of trusted vendors with whom we maintain current business practices
- Samples tested and verified before placing large orders

When To Use This Service

- You've received an EOL notice from your manufacturer
- You need to upgrade or replace existing unit
- You have a cost target
- You don't compromise on quality
