

## Introduction

EOL components prompt time and energy to be spent on re-designing of products and extra sourcing charges.

LCD lifecycle support is a service for customers who have panels in need of component replacement parts.

As broken components on your panel go EOL, AGDisplays quickly sources and installs components for increased panel lifespan.

We follow strict supply chain practices and well-maintained databases that lead to ultimate quality and customer satisfaction. Moreover, we use test sample orders and validate supply chain offerings prior to large order placement.

## About Lifecycle Management

### Why Lifecycle Management?

- We follow strict supply chain practices and well-maintained databases that lead to ultimate quality and customer satisfaction.
- We use test sample orders and validate the supply chain offerings prior to large order placement.
- International IPO office for overseas procurement
- Continual supply chain analysis
- Current market LCD availability
- Cross-verification of alternate components

## When To Use This Service

- Drop in replacement needed
- Supplier sourcing needed
- Quality high priority
- Continuity of supply required
- Trustworthy vendors required

## Prepare Details

- Part number of panel
- Panel specifications
- If exact drop-in LCD is unavailable, list most important specs
- Provide current solution for design improvements
- Total length of support needed

## Industries

- Avionics
- Financial
- Marine
- Marketing
- Medical
- Military
- Point of Sale
- Transportation

## Customer Benefits

- Improvements on LCD design, as requested
- Quality testing assurance to avoid failure of components
- Qualified sales and procurement personnel, and technical support available
- If needed, drop-in components sourced from additional suppliers
- Prompt time and energy for lifecycle support for short lead times
