1.Application

This data sheet applies to a color TFT LCD module, PD050VXB.This module applies to OA product, computer peripheral, industrial meter, image communication and multi-media. If you must use in severe reliability environment, please don't extend over E Ink's reliability test conditions. If you use PD050VXB, Elnk Holding Inc advises your systems use E Ink's timing controller IC (PVI-2003A) which will generate proper timing signals to control it.

2. Features

- . VGA (640*480 pixels) resolution
- . Amorphous silicon TFT LCD panel with back-light unit
- . Pixel in stripe configuration
- . Thin and light weight
- . Display Colors：262,144 colors
- . Portrait mode
- . TTL transmission interface

U/D	STVU	STVD	Shift
1	Hi-Z	Input	Down to Up
0	Input	Hi-Z	Up to Down

Note 5-4: Gate driver shift clock

Note 5-5: When OE is connected to high "1", the driver outputs are disabled (Gate output = V_{EE}).
Under this condition, the operation of registers will not be affected.

Note 5-6: Select left or right shift

R/L	DIO1	DIO2	Shift
1	Input	Hi-Z	Left to right
0	Hi-Z	Input	Right to left

Note 5-7: Latch the polarity of outputs and switch the new data to outputs. At the rising edge (LD),
latch the "POL" signal to control the polarity of the outputs.

Note 5-8: Control whether the Data R0~G5 are inverted or not. (E Ink suggests connecting to GND)
When "REV=1", these data will be inverted.
EX: "00"→"3F", "07"→"38", "15"→"2A"

Note 5-9: Polarity selector for dot-inversion control. Available at the rising edge of LD.
When POL=1: Even outputs range from V1~V7, and Odd outputs range from V8~V14;
When POL=0: Even outputs range from V8~V14, and Odd outputs range from V1~V7.

Note 5-10: $V_{DD2} = +7.7V$

Note 13-6: The "LED Life time " is defined as the module brightness decrease to 50% original
Brightness that the ambient temperature is 25℃ and I_{LED} =200mA
As the performance of an LED may differ when assembled as a monitor together with a
TFT panel due to different environmental temperature.
Estimated lifetime could vary on a different temperature and usually higher
temperature could reduce the life significantly.

14. Handling Cautions

14-1) Mounting of module
    a) Please power off the module when you connect the input/output connector.
    b) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
    c) Protective film (Laminator) is applied on surface to protect it against scratches and dirt.
    d) Please following the tear off direction as figure14-1 to remove the protective film as slowly as
       possible, so that electrostatic charge can be minimized.

14-2) Precautions in mounting
    a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled,
       wipe it with soft dry cloth.
    b) Wipe off water drops or finger grease immediately. Long contact with water may
       cause discoloration or spots.
    c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface.
       Please handle with care.
    d) Since CMOS LSI is used in the module. So take care of static electricity and
       earth yourself when handling.

14-3) Adjusting module
    a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
    b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications
       described may not be satisfied.

14-4) Others
    a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many
       hours.
    b) Store the module at a room temperature place.
    c) The voltage of beginning electric discharge may over the normal voltage because of leakage
       current from approach conductor by to draw lump read lead line around.
    d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel.
       Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it
       out immediately with soap.
    e) Observe all other precautionary requirements in handling general electronic components.
   f) Please adjust the voltage of common electrode as material of attachment by 1 module.

6	Thermal Cycling Test (non-operating)	-30℃ → +80℃, 100 Cycles 30min 30min	
7	Vibration Test (non-operating)	Frequency：10 ~ 55 H$_Z$, Amplitude：1 mm Sweep time: 11 min Test Period: 6 Cycles for each direction of X, Y, Z	
8	Shock Test (non-operating)	100G, 6ms Direction: ±X, ±Y, ±Z Cycle: 3 times	
9	Electrostatic Discharge Test (non-operating)	200pF, 0Ω ±200V 1 time / each terminal	

Ta : ambient temperature

Note : The protective film must be removed before temperature test.

[Criteria]

In the standard conditions, there is not display function NG issue occurred. (Including：line defect, no image) All the cosmetic specification is judged before the reliability stress.
