TFT COLOR LCD MODULE

NL8048BC19-03

18cm (7.0 Type) WVGA LVDS interface (1port)

PRELIMINARY DATA SHEET =

DOD-PP-0567 (2nd edition)

This PRELIMINARY DATA SHEET is updated document from DOD-PP-0551(1).

All information is subject to change without notice. Please confirm the sales representative before starting to design your system.

INTRODUCTION

The Copyright to this document belongs to NEC LCD Technologies, Ltd. (hereinafter called "NEC"). No part of this document will be used, reproduced or copied without prior written consent of NEC.

NEC does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NEC.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NEC, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "Standard", "Special", and "Specific" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NEC sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NEC standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NEC quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL8048BC19-03 is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATION

• For industrial use

1.3 FEATURES

- High luminance
- High contrast
- Wide viewing angle
- LVDS interface
- Reversible-scan direction
- Selectable 8bit or 6bit digital signals for data of RGB
- LED backlight type
- Replaceable lamp for backlight
- Acquisition product for UL60950-1/CSA-C22.2 No.60950-1-03 (File number: E170632)
- Suitable for setting in the portrait position (See "4.7.2 Setting the LCD module in the portrait position (vertical)".

Comparison table of NL8048BC19-03 and NL8048BC19-02

Item	NL8048BC19-03	NL8048BC19-02	2
Designed viewing direction	At DPS= low or open: Normal scan • Viewing direction without image reversal : right side (3 o'clock) • Viewing direction with contrast peak : left side (9 o'clock) • Viewing angle with optimum grayscale (γ≒ 2.2) : normal axis(perpendicular)	 At DPS= low or open: Normal scan Viewing direction without image reversal: up side (12 o'clock) Viewing direction with contrast peak: down side (6 o'clock) Viewing angle with optimum grayscale (γ≒ 2.2): normal axis(perpendicular)

2. GENERAL SPECIFICATIONS

	-
Display area	152.4 (H) × 91.44 (V) mm
Diagonal size of display	18cm (7.0 inches)
Drive system	a-Si TFT active matrix
Display color	16,777,216 colors (At 8-bit input, FRC terminal= High) 262,144 colors (At 6-bit input, FRC terminal= Low or Open)
Pixel	800 (H) × 480 (V) pixels
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe
Dot pitch	$0.0635 \text{ (H)} \times 0.1905 \text{ (V)} \text{ mm}$
Pixel pitch	$0.1905 \text{ (H)} \times 0.1905 \text{ (V)} \text{ mm}$
Module size	$170.0 \text{ (W)} \times 111.0 \text{ (H)} \times 8.5 \text{ (D)} \text{ mm (typ.)}$
Weight	165g (typ.)
Contrast ratio	1000:1(typ.)
Viewing angle	At the contrast ratio ≥10:1 • Horizontal: Right side 80° (typ.), Left side 80° (typ.) • Vertical: Up side 80° (typ.), Down side 80° (typ.)
Designed viewing direction	 At DPS= Low or Open: Normal scan Viewing direction without image reversal: right side (3 o'clock) Viewing direction with contrast peak: left side (9 o'clock) Viewing angle with optimum grayscale (γ≒ 2.2): normal axis (perpendicular)
Polarizer surface	Clear
Polarizer pencil-hardness	3H (min.) [by JIS K5400]
Color gamut	At LCD panel center 60 % (typ.) [against NTSC color space]
Response time	$Ton+Toff (10\% \longleftrightarrow 90\%)$ 18 ms (typ.)
Luminance	At IL = 25 mA 400 cd/m ² (typ.)
Signal system	LVDS interface (1port) (Receiver: THC63LVDF84B, THine Electronics Inc. or equivalent) 8bit/6bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE)
Power supply voltage	LCD panel signal processing board: 3.3V
Backlight	LED backlight type: (Replaceable part • Lamp holder set: Type No. 70LHS05)
Power consumption	At IL=25mA, Checkered flag pattern 3.4 W (typ.)

3. BLOCK DIAGRAM

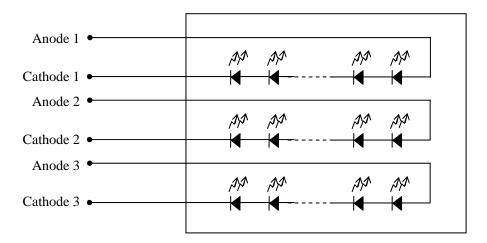

Note1: Relations between GND (Signal ground) and FG (Frame ground) in the LCD module are as follows.

GND - FG Connected

Note2: GND and FG must be connected to customer equipment's ground, and it is recommended that these grounds are connected together in customer equipment.

Note3: Backlight in detail

Backlight

4. DETAILED SPECIFICATIONS

4.1 MECHANICAL SPECIFICATIONS

Parameter	Specification		Unit
Module size	$170.0 \pm 0.5 \text{ (W)} \times 111.0 \pm 0.5 \text{ (H)} \times 8.5 \pm 0.5 \text{ (D)}$	Note1	mm
Display area	152.4 (H) × 91.44 (V)	Note1	mm
Weight	165 (typ.), 175 (max.)		g

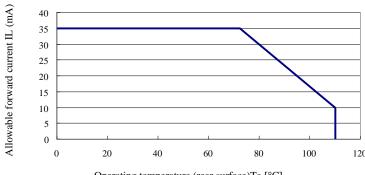

Note1: See "7. OUTLINE DRAWINGS".

NEC NEC LCD Technologies, Ltd.

NL8048BC19-03

4.3.2 Backlight

(Ta=25°C, Note1, Note2)

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Forward current	IL	-	25.0	30.0	mA	-
Forward Voltage	VL	-	29.7	34.2	V	at IL= 25 mA

Note1: Please drive with constant current.

Note2: The Luminance uniformity may be changed depending on the current variation between 3 circuits. It is recommended that the current value difference between each circuit is less than 5%.

4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

Power sup	ply voltage	Ripple voltage Note1 (Measure at input terminal of power supply)	Unit
VCC	3.3V	≤ 100	mVp-p

Note1: The permissible ripple voltage includes spike noise.

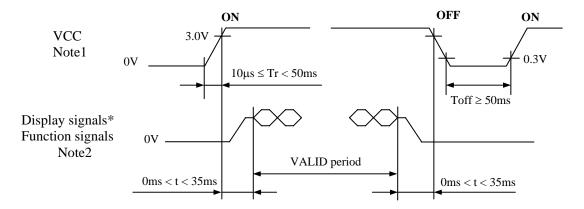

4.3.4 Fuse

Parameter	Fuse		Rating	Fusing current	Remarks
Tarameter	Type	Supplier	Rating	rusing current	Remarks
VCC	FCC16162AB	KAMAYA ELECTRIC	1.6A	3.24	Note1
VCC	rcc10102AB	CO., LTD.	32V	3.2A	Note1

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel signal processing board

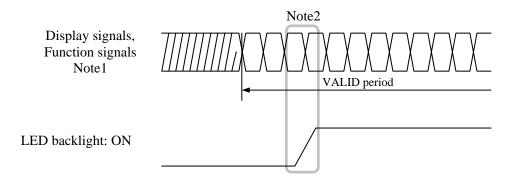

^{*} These signals should be measured at the terminal of 100Ω resistance.

Note1: In terms of voltage variation (voltage drop) while VCC rising edge is below 3.0V, a protection circuit may work, and then this product may not work.

Note2: Display signals (D0+/-, D1+/-, D2+/-, D3+/-, CLK+/-) and function signals (DPS, FRC, MSL) must be Low or High-impedance, exclude the VALID period (See above sequence diagram), in order to avoid that internal circuits is damaged.

If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If customer stops the display and function signals, they should be cut VCC.

4.4.2 Backlight lighting circuit

Note1: These are the display and function signals for LCD panel signal processing board.

Note2: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

4.5.1 LCD panel signal processing board

4.6 DISPLAY COLORS AND INPUT DATA SIGNALS

4.6.1 Combinations between input data signals, FRC signal and MSL signal

This product can display in equivalent to 16,777,216 colors in 256 gray scales and 262,144 colors in 64 gray scales by combination between input data signals, FRC signal and MSL signal. See following table.

Combination	Input data signals	Input data mapping	CN1- Pin No.1 and 2	FRC terminal	MSL terminal	Display colors	Remarks
1	8 bit	Map A	D3+/-	High	Low	16,777,216	Note1
2	8 bit	Map B	D3+/-	High	High	16,777,216	Note1
3	6 bit	-	GND	Low or open	Low	262,144	Note2

Note1: See "**4.6.2 16,777,216 colors**". Note2: See "**4.6.3 262,144 colors**".

4.6.2 16,777,216 colors

This product can display equivalent of 16,777,216 colors in 256 gray scales by combination ① and ②. (See "**4.6.1 Combinations between input data signals, FRC signal and MSL signal** ".) Also the relation between display colors and input data signals is as the following table.

4.7 DISPLAY POSITIONS AND SCANNING DIRECTIONS

4.7.1 Setting the LCD module in the landscape position (horizontal)

(1) Display positions

The following table is the coordinates per pixel (See figure of "4.7.1 (2) Scanning directions".).

C(0, 0)	C(1, 0)	• • •	C(X, 0)	• • •	C(798, 0)	C(799, 0)
C(0, 1)	C(1, 1)	• • •	C(X, 1)	• • •	C(798, 1)	C(799, 1)
•	•	•	•	•	•	•
•	•		•		•	
•	•	•	•	•	•	•
C(0, Y)	C(1, Y)	• • •	C(X, Y)	• • •	C(798, Y)	C(799, Y)
•	•	•	•	•	•	•
•	•	• • •	•	• • •	•	•
•	•	•	•	•	•	•
C(0, 478)	C(1, 478)	• • •	C(X, 478)	• • •	C(798, 478)	C(799, 478)
C(0, 479)	C(1, 479)	• •	C(X, 479)	• •	C(798, 479)	C(799, 479)

(2) Scanning directions

The following figures are seen from a front view. Also the arrow shows the direction of scan.

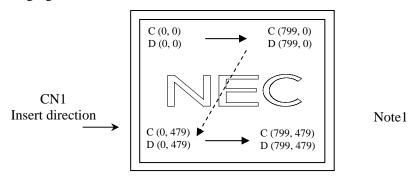

Figure 1. Normal scan (DPS: Low or Open)

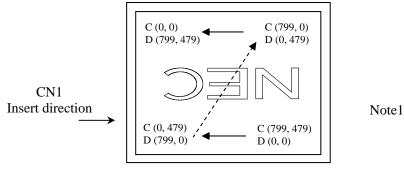

Figure 2. Reverse scan (DPS: High)

Note1: Meaning of C (X, Y) and D (X, Y)

C (X, Y): The coordinates of the display position (See "4.7.1 (1) DISPLAY POSITIONS".)

D (X, Y): The data number of input signal for LCD panel signal processing board

4.7.2 Setting the LCD module in the portrait position (vertical)

(1) Display positions

The following table is the coordinates per pixel (See figure of "4.7.2 (2) Scanning directions".).

C(799, 0)	C(799, 1)	• • •	C(799, Y)	• • •	C(799,478)	C(799,479)
C(798, 0)	C(798, 1)	• • •	C(798, Y)	• • •	C(798,478)	C(798,479)
•	•	•	•	•	•	•
•	•	• • •	•	• • •	•	• • •
•	•	•	•	•	•	•
C(X, 0)	C(X, 1)	• • •	C(X, Y)	• • •	C(X,478)	C(X,479)
•	•	•	•	•	•	•
•	•		•	• • •	•	•
•	•	•	•	•	•	•
C(1, 0)	C(1, 1)	• • •	C(1, Y)	• • •	C(1, 478)	C(1, 479)
C(0, 0)	C(0, 1)		C(0, Y)	• • •	C(0, 478)	C(0, 479)

(2) Scanning directions

The following figures are seen from a front view. Also the arrow shows the direction of scan.

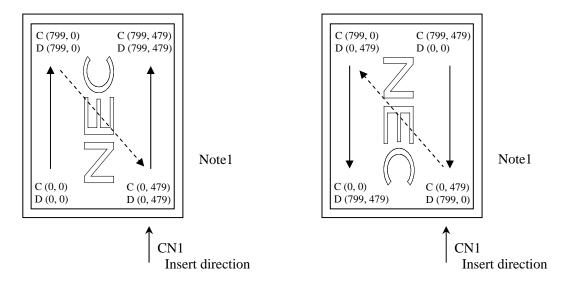

Figure 1. Normal scan (DPS: Low or Open)

Figure 2. Reverse scan (DPS: High)

Note1: Meaning of C (X, Y) and D (X, Y)

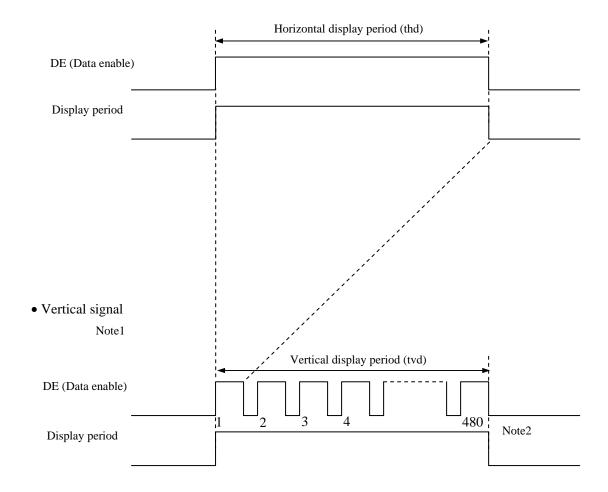

C (X, Y): The coordinates of the display position (See "4.7.2 (1) Display positions".)

D (X, Y): The data number of input signal for LCD panel signal processing board

4.8 INPUT SIGNAL TIMINGS

4.8.1 Outline of input signal timings

• Horizontal signal Note1

Note1: This diagram indicates virtual signal for set up to timing.

Note2: See "4.8.3 Input signal timing chart" for numeration of pulse.

PRELIMINARY

NEC NEC LCD Technologies, Ltd.

NL8048BC19-03

4.8.2 Timing characteristics

(Note1, Note2, Note3)

	Paramete	r	Symbol	min.	typ.	max.	Unit	Remarks		
	Fre	equency	1/tc	28.0	32.256	36.0	MHz	31.002ns (typ.)		
CLK		Duty	-		_		1			
	Rise tir	ne, Fall time	-	_			ns	-		
	CLK-DATA	Setup time	-				ns			
DATA	CLK-DATA	Hold time	-		-		ns	-		
	Rise tir	ne, Fall time	-				ns			
		Cycle	th	28.44	31.746	36.57	μs	31.5 kHz (typ.)		
	Horizontal	Cycle	ui	-	1,024	-	CLK	31.3 KHZ (typ.)		
		Display period	thd		800		CLK	-		
		Cycle	tv	14.931	16.667	19.19	ms			
DE	Vertical (One frame)	Cycle	tv	-	525	-	Н	60.0 Hz (typ.)		
	(======================================	Display period	tvd		480		Н			
	CLK-DE	Setup time	-		•	•	ns			
	CLK-DE	Hold time	-		-		ns	-		
	Rise tir	me, Fall time	-				ns			

Note1: Definition of parameters is as follows.

tc = 1CLK, th = 1H

Note2: See the data sheet of LVDS transmitter.

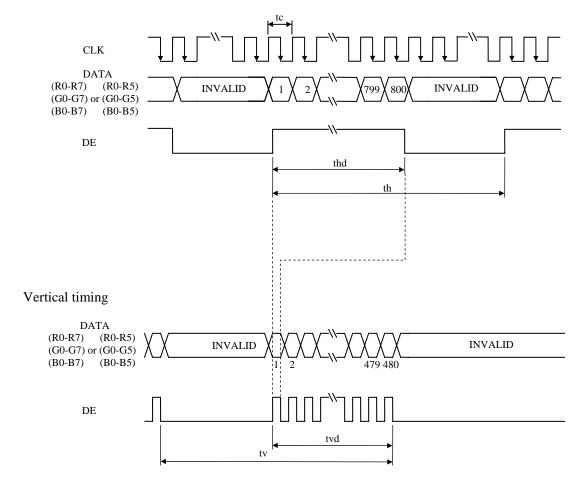

Note3: Vertical cycle (tv) should be specified in integral multiple of Horizontal cycle (th).

PRELIMINARY

NEC NEC LCD Technologies, Ltd.

4.8.3 Input signal timing chart

Horizontal timing

4.9 OPTICS

4.9.1 Optical characteristics

(Note1, Note2)

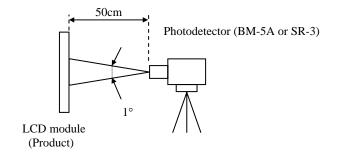

Paramete	er	Condition	Symbol	min.	typ.	max.	Unit	Measuring instrument	Remarks
Luminance		White at center $\theta R = 0^{\circ}$, $\theta L = 0^{\circ}$, $\theta U = 0^{\circ}$, $\theta D = 0^{\circ}$	L	250	400	-	cd/m ²	BM-5A	-
Contrast ra	ıtio	White/Black at center $\theta R = 0^{\circ}$, $\theta L = 0^{\circ}$, $\theta U = 0^{\circ}$, $\theta D = 0^{\circ}$	CR	600	1000	-	-	BM-5A	Note3
Luminance uni	formity	White $\theta R = 0^{\circ}$, $\theta L = 0^{\circ}$, $\theta U = 0^{\circ}$, $\theta D = 0^{\circ}$	LU	-	1.25	1.4	-	BM-5A	Note4

Pasponsa ti	ima	White to Black	Ton	-	3	5	ms	BM-5A	Note6
Response time		Black to White	Toff	-	15	21	ms	DIVI-JA	Note7
	Right	θU= 0°, θD= 0°, CR≥ 10	θR	70	80	-	0		
Viewing engle	Left	θ U= 0°, θ D= 0°, CR \geq 10	θL	70	80	-	0	EZ	Nota
Viewing angle	Up	$\theta R = 0^{\circ}, \theta L = 0^{\circ}, CR \ge 10$	θU	70	80	-	0	Contrast	Note8
	Down	$\theta R = 0^{\circ}, \theta L = 0^{\circ}, CR \ge 10$	θD	70	80	-	0		

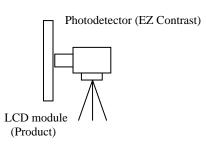

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta = 25°C, VCC = 3.3V, IL = 25mA, Display mode: WVGA, Horizontal cycle = 1/31.5kHz, Vertical cycle = 1/60.0Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation after 20minutes from working the product, in the dark room. Also measurement methods are as follows.

Note3: See "4.9.2 Definition of contrast ratio".

Note4: See "4.9.3 Definition of luminance uniformity".

Note5: These coordinates are found on CIE 1931 chromaticity diagram.

Note6: Product surface temperature: TopF = 27°C Note7: See "**4.9.4 Definition of response times**". Note8: See "**4.9.5 Definition of viewing angles**".

NEC NEC LCD Technologies, Ltd.

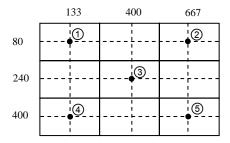

4.9.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

4.9.3 Definition of luminance uniformity

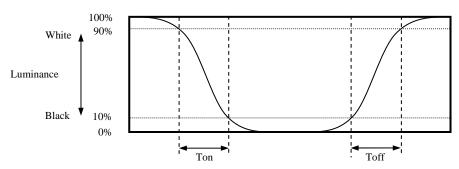

The luminance uniformity is calculated by using following formula.

The luminance is measured at near the 5 points shown below.

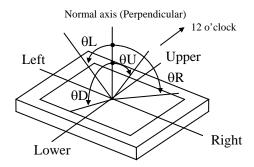

4.9.4 Definition of response times

Response time is measured, the luminance changes from "white" to "black", or "black" to "white" on the same screen point, by photo-detector. Ton is the time it takes the luminance change from 90% down to 10%. Also Toff is the time it takes the luminance change from 10% up to 90% (See the following diagram.).

4.9.5 Definition of viewing angles

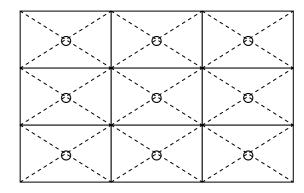

5. RELIABILITY TESTS

Test item	Condition	Judgment
High temperature and humidity (Operation)	① 60 ± 2°C, RH= 90%, 240hours ② Display data is black.	
High temperature (Operation)	 ① 70 ± 3°C, 240hours ② Display data is black. 	
Heat cycle (Operation)	 ① -20 ± 3°C1hour 70 ± 3°C1hour ② 50cycles, 4 hours/cycle ③ Display data is black. 	
Thermal shock (Non operation)	 30 ± 3°C30minutes 80 ± 3°C30minutes 100cycles, 1hour/cycle Temperature transition time is within 5 minutes. 	No display malfunctions Note1
ESD (Operation)	 150pF, 150Ω, ±10kV 9 places on a panel surface Note2 10 times each places at 1 sec interval 	
Dust (Operation)	 ① Sample dust: No. 15 (by JIS-Z8901)) ② 15 seconds stir ③ 8 times repeat at 1 hour interval 	
Vibration (Non operation)	 5 to 100Hz, 19.6m/s² 1 minute/cycle X, Y, Z directions 120 times each directions 	No display malfunctions No physical damages
Mechanical shock (Non operation)	 539m/ s², 11ms ±X, ±Y, ±Z directions 5 times each directions 	Note1

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

6. PRECAUTIONS

6.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "6.2 CAUTIONS" and "6.3 ATTENTIONS", after understanding these contents!

This sign has the meaning that customer will be injured by himself or the product will sustain a damage, if customer has wrong operations.

This sign has the meaning that customer will be injured by himself, if customer has wrong operations.

6.2 CAUTIONS

- * Do not touch the working backlight. There is a danger of burn injury.
- * Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: To be not greater 539m/s² and to be not greater 11ms, Pressure: To be not greater 19.6 N (\$\phi\$16mm jig))

6.3 ATTENTIONS

6.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② Do not hook nor pull cables, in order to avoid any damage.
- ③ When the product is put on the table temporarily, display surface must be placed downward.
- 4 When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ⑤ The torque for product mounting screws must never exceed 0.147N·m. Higher torque might result in distortion of the bezel.
- The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ② Do not press or rub on the sensitive product surface. When cleaning the product surface, use of the cloth with ethanolic liquid such as screen cleaner for LCD is recommended.
- On not push nor pull the interface connectors while the product is working.
- When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal for the worst, please wash it out with soap.

6.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurring by temperature difference, the product packing box should be opened after enough time being left under the environment of an unpacking room. Evaluate the leaving time sufficiently because a situation of dew condensation occurring is changed by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with packing state)
- 3 Do not operate in high magnetic field. Circuit boards may be broken down by it.
- 4 This product is not designed as radiation hardened.

6.3.3 Characteristics

The following items are neither defects nor failures.

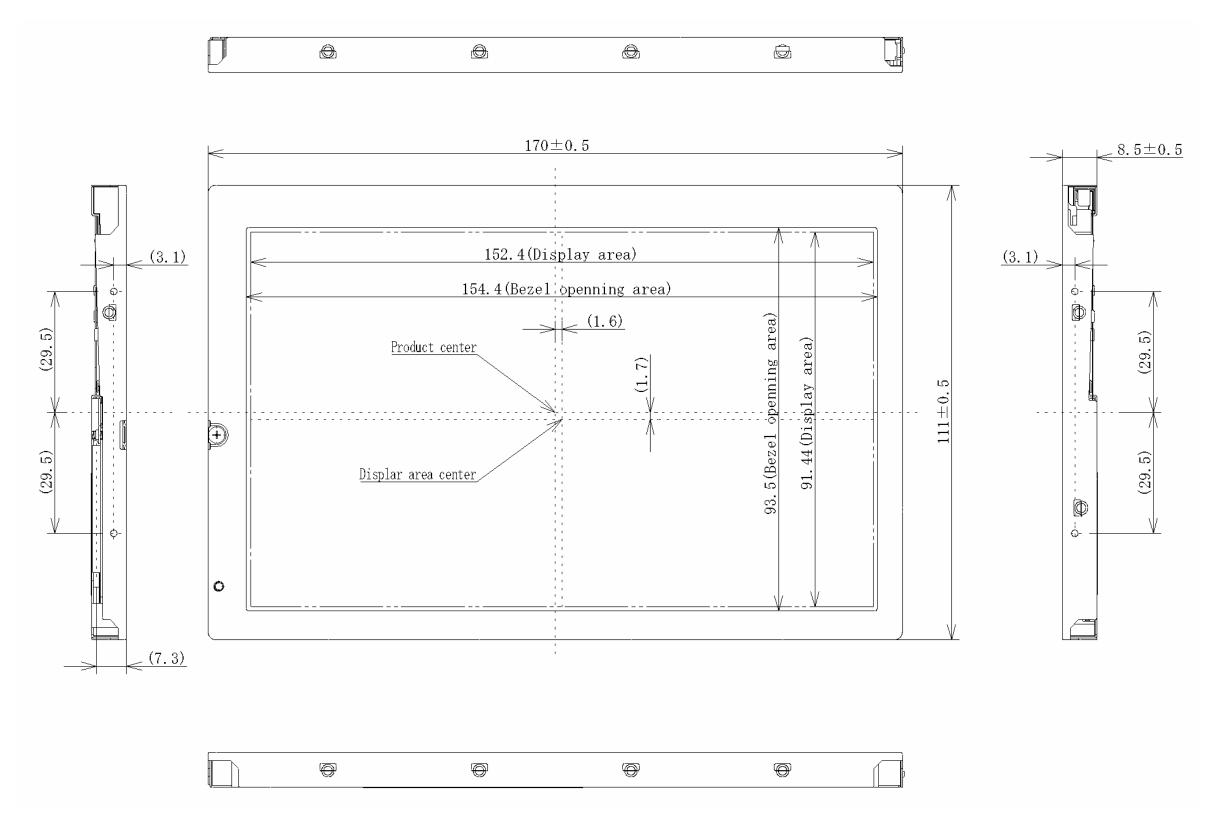

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flicker, vertical seam or small spot may be observed depending on display patterns.
- 3 Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- 4 The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.
- The interference noise between input signal frequency for this product's signal processing board and luminance control frequency of backlight driving circuit may appear on a display. Set up luminance control frequency of backlight driving circuit so that the interference noise does not appear.

6.3.4 Other

- ① All GND and VCC terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing LED backlight.
- 4 Pay attention not to insert foreign materials inside of the product, when using tapping screws.
- ⑤ Pack the product with original shipping package, in order to avoid any damages during transportation, when returning the product to NEC for repair and so on.

7. OUTLINE DRAWINGS

7.1 FRONT VIEW

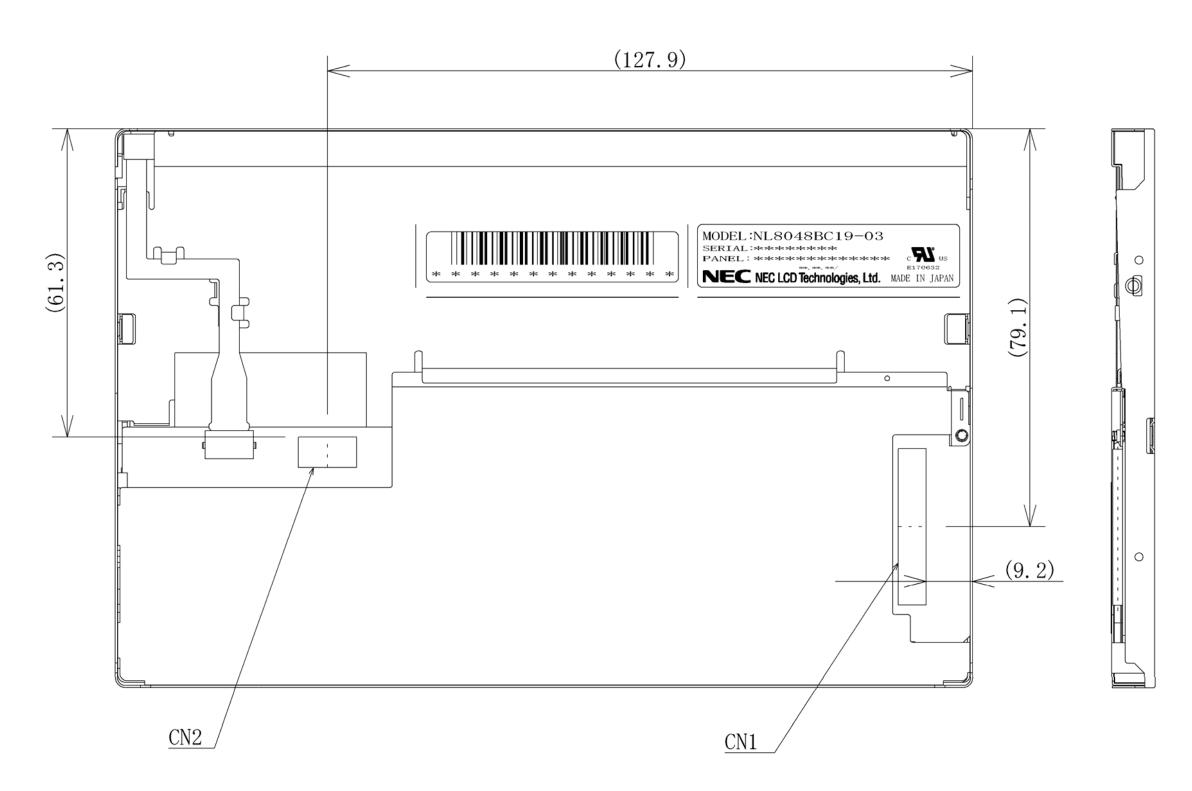

Note1: The values in parentheses are for reference.

Note2: The torque for product mounting screws must never exceed 0.147N·m.

Unit: mm

7.2 REAR VIEW

Note1: The values in parentheses are for reference.

Note2: The torque for product mounting screws must never exceed 0.147N·m.

Unit: mm

NEC NEC LCD Technologies, Ltd.

REVISION HISTORY

The inside of latest specifications is revised to the clerical error and the major improvement of previous edition. Only a changed part such as functions, characteristic value and so on that may affect a design of customers, are described especially below.

Edition	Document number	Prepared date		Revision contents and signa	ature
