#### INTRODUCTION

The Copyright to this document belongs to NLT Technologies, Ltd. (hereinafter called "NLT"). No part of this document will be used, reproduced or copied without prior written consent of NLT.

NLT does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NLT.

Some electronic products would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NLT, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three grades: "Standard", "Special", and "Specific".

Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard is required to contact an NLT sales representative in advance.

The **Standard:** Applications as any failure, malfunction or error of the products are free from any damage to death, human bodily injury or other property (Products Safety Issue) and not related the safety of the public (Social Issues), like general electric devices.

Examples: Office equipment, audio and visual equipment, communication equipment, test and measurement equipment, personal electronic equipment, home electronic appliances, car navigation system (with no vehicle control functions), seat entertainment monitor for vehicles and airplanes, fish finder (except marine radar integrated type), PDA, etc.

The **Special:** Applications as any failure, malfunction or error of the products might directly cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and required high level reliability by conventional wisdom.

Examples: Vehicle/train/ship control system, traffic signals system, traffic information control system, air traffic control system, surgery/operation equipment monitor, disaster/crime prevention system, etc.

The **Specific:** Applications as any failure, malfunction or error of the products might severe cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and developed, designed and manufactured in accordance with the standards or quality assurance program designated by the customer who requires extremely high level reliability and quality. Examples: Aerospace system (except seat entertainment monitor), nuclear control system, life support system, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

#### **1. OUTLINE**

#### 1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL8060AC26-52D is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

#### **1.2 APPLICATION**

• For industrial use

#### **1.3 FEATURES**

- High luminance
- High contrast
- ColorXcell technology (Color Enhancement)
- Wide viewing angle
- Wide temperature range
- LVDS interface
- Reversible-scan direction
- Selectable 8bit or 6bit digital signals for data of RGB
- Long life LED backlight
- Replaceable lamp for backlight
- Built in LED driver

#### 2. GENERAL SPECIFICATIONS

Display area	211.2 (H) × 158.4 (V) mm		
Diagonal size of display	26cm (10.4 inches)		
Drive system	a-Si TFT active matrix		
Display color	16,777,216 colors (At 8-bit input, FRC terminal= High) 262,144 colors (At 6-bit input, FRC terminal= Low or Open)		
Pixel	800 (H) $\times$ 600 (V) pixels		
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe		
Dot pitch	$0.088 (H) \times 0.264 (V) mm$		
Pixel pitch	$0.264 (H) \times 0.264 (V) mm$		
Module size	243.0 (W) × 185.1 (H) × 10.5 (D) mm (typ.)		
Weight	TBD g (typ.)		
Contrast ratio	900:1 (typ.)		
Viewing angle	<ul> <li>At the contrast ratio ≥10:1</li> <li>Horizontal: Right side (80)° (typ.), Left side (80)° (typ.)</li> <li>Vertical: Up side (80)° (typ.), Down side (80)° (typ.)</li> </ul>		
Designed viewing direction	<ul> <li>At DPS= Low or Open: Normal scan</li> <li>Viewing direction without image reversal: Up side (12 o'clock)</li> <li>Viewing direction with contrast peak: Down side (6 o'clock)</li> <li>Viewing angle with optimum grayscale (γ≒ 2.2): Normal axis (perpendicular)</li> </ul>		
Polarizer surface	Antiglare		
Polarizer pencil-hardness	3H (min.) [by JIS K5600]		
Color gamut	At, LCD panel center 40 % (typ.) [against NTSC color space]		
Response time	$Ton+Toff (10\% \leftrightarrow 90\%)$ (18) ms (typ.)		
Luminance	At the maximum luminance control 400 cd/m <sup>2</sup> (typ.)		
Signal system	LVDS 1port (Receiver: THC63LVDF84B, THine Electronics Inc. or equivalent) [8bit/6bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE)]		
Power supply voltage	LCD panel signal processing board: 3.3V LED driver: 12V		
Backlight	LED backlight built in LED driver (Replaceable part • Lamp holder set: Type No. TBD		
Power consumption	At the maximum luminance control, Checkered flag pattern		

#### **3. BLOCK DIAGRAM**

#### 4. DETAILED SPECIFICATIONS

#### 4.1 MECHANICAL SPECIFICATIONS

Parameter	Specification	Unit	
Module size	$243.0 \pm 0.5$ (W) × 185.1 ± 0.5 (H) × 10.5 ± 0.5 (D)	Note1	mm
Display area	211.2 (H) × 158.4 (V)	Note1	mm
Weight	TBD (typ.), TBD (max.)		g

Note1: See "8. OUTLINE DRAWINGS".

#### 4.2 ABSOLUTE MAXIMUM RATINGS

PWM signal	Low	VDFL1	-	-	(0.8)	V	-
Input voltage for	High	VDFH2	(2.0)	-	(VDD)	V	
BRTC signal	Low	VDFL2	-	-	(0.8)	V	-
PWM frequency		$\mathbf{f}_{\text{PWM}}$	(100)	-	10k	Hz	Note5, Note6
PWM duty cycle		DR <sub>PWM</sub>	(10)	-	100	%	Note7
PWM pulse v	vidth	tPWH	(10)	-	-	μs	

Note1: When designing of the power supply, take the measures for the prevention of surge voltage.Note2: The power supply lines (VDD and GND) may have ripple voltage during luminance control of LED. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor between the power supply lines (VDD and GND) to reduce the noise if necessary.

Note3: This value excludes peak current such as overshoot current.

Note4: At the maximum luminance control Note5: A recommended  $f_{PWM}$  value is as follows.

$$f_{PWM} = \frac{2n-1}{4} \times fv$$

(n = integer, fv = frame frequency of LCD module)

- Note6: Depending on the frequency used, some noise may appear on the screen, please conduct a thorough evaluation.
- Note7: While the BRTC signal is high, do not set the tPWH (PWM pulse width) is less than (10)µs. It may cause abnormal working of the backlight. In this case, turn the backlight off and then on again by BRTC signal.

4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are over the permissible values as the following table, but there might be noise on the display image.

This product works if the ripple voltage levels are over the permissible values as the following table, but there might be noise on the display image.

Power supp	ly voltage	Ripple voltage Note1 (Measure at input terminal of power supply)	Unit
VCC	3.3V	≤ 100	mVp-p
VDD	12.0V	≤ 200	mVp-p

Note1: The permissible ripple voltage includes spike noise.

4.3.4 Fuse

Dogomotor		Fuse	Dating	Eucing our	Domonica	
Parameter	Туре	Supplier	Rating	Fusing current	Remarks	
VCC FCC16152AB		KAMAYA ELECTRIC	1.5A	3.0A		
VCC	FCC10132AB	CO.,LTD	36V	5.0A	Note1	
VDD FCC16152AB		KAMAYA ELECTRIC	1.5A	3.0A	Note1	
VDD	TCC10132AD	CO.,LTD	36V	5.0A		

Note1: The power supply's rated current must be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

#### 4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel signal processing board

\* These signals should be measured at the terminal of  $100\Omega$  resistance.

- Note1: If there is a voltage variation (voltage drop) at the rising edge of VCC below 3.0V, there is a possibility that a product does not work due to a protection circuit.
- Note2: Display signals (D0+/-, D1+/-, D2+/-, D3+/- and CLK+/-) and function signals (DPS, FRC and MSL) must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage.
  If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VCC also must be shut down.

#### 4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

4.5.1 LCD panel signal processing board

(2) Input data signal: 8bit, MAP B

(3) Input data signal: 6bit

#### 4.6 DISPLAY COLORS AND INPUT DATA SIGNALS

#### 4.6.1 Combinations of input data signals, FRC and MSL signal

This product can display 16,777,216 colors equivalent with 256 gray scales and 262,144 colors with 64 gray scales by combination of input data signals, FRC and MSL signal. See the following table.

Combination	Input data signals	Input Data mapping	CN1- Pin No.1 and 2	FRC terminal	MSL terminal	Display colors	Remarks
1	8 bit	MAP A	D3+/-	High	Low	16,777,216	Note1
2	8 bit	MAP B	D3+/-	High	High	16,777,216	Note1
3	6 bit	-	GND	Low or Open	Low	262,144	Note2

Note1: See "4.6.2 16,777,216 colors".

Note2: See "4.6.3 262,144 colors".

#### 4.6.2 16,777,216 colors

This product can display 16,777,216 colors equivalent with 256 gray scales by combination ① or ②. (See "**4.6.1 Combinations of input data signals, FRC and MSL signal**".) Also the relation between display colors and input data signals is as follows.

Disula	1								Data	a sig	nal	(0: I	LOW	leve	el, 1	: Hi	gh le	evel)	)

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

 $Ta = 25^{\circ}C$ , VCC = 3.3V, VDD = 12.0V, PWM: Duty 100%, Display mode: SVGA,

Horizontal cycle= 1/37.463kHz, Vertical cycle= 1/59.94Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation 20minutes after the product works in the dark room. Also measurement methods are as follows.

Note3: See "4.10.2 Definition of contrast ratio".

- Note4: See "4.10.3 Definition of luminance uniformity".
- Note5: These coordinates are found on CIE 1931 chromaticity diagram.
- Note6: Product surface temperature: TopF= TBD°C
- Note7: See "4.10.4 Definition of response times".
- Note8: See "4.10.5 Definition of viewing angles".

#### 4.10.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

Contrast ratio (CR) = Luminance of white screen Luminance of black screen

4.10.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

 $Luminance uniformity (LU) = \frac{Maximum luminance from (1) to (5)}{Minimum luminance from (1) to (5)}$ 

The luminance is measured at near the 5 points shown below.

	13	33	4	00	e	667	
100	•	<u>)</u>			•	2	
300	+			3			
500		<u>4</u>				5	

#### 4.10.4 Definition of response times

Response time is measured at the time when the luminance changes from "white" to "black", or "black" to "white" on the same screen point, by photo-detector. Ton is the time when the luminance changes from 90% down to 10%. Also Toff is the time when the luminance changes from 10% up to 90% (See the following diagram.).

#### 4.10.5 Definition of viewing angles

#### 5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

#### This lifetime is the estimated value, and is not guarantee value.

	Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3	Unit	
LED elementary substance	25°C (Ambient temperature of the product) Continuous operation, PWM Duty:100%	100,000	h

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for an LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially in case the product works under high temperature environment, the lifetime becomes short.

#### 6. RELIABILITY TESTS

Test item	Condition	Judgment Note1
High temperature and humidity (Operation)	<ol> <li>60 ± 2°C, RH= 90%, 240hours</li> <li>Display data is black.</li> </ol>	
High temperature (Operation)	<ol> <li>80 ± 3°C, 240hours</li> <li>Display data is black.</li> </ol>	
Heat cycle (Operation)	<ol> <li>-30 ± 3°C1hour 80 ± 3°C1hour</li> <li>50cycles, 4 hours/cycle</li> <li>Display data is black.</li> </ol>	
Thermal shock (Non operation)	<ul> <li>① -30 ± 3°C30minutes 80 ± 3°C30minutes</li> <li>② 100cycles, 1hour/cycle</li> <li>③ Temperature transition time is within 5 minutes.</li> </ul>	No display malfunctions
ESD (Operation)	<ul> <li>① 150pF, 150Ω, ±10kV</li> <li>② 9 places on a panel surface Note2</li> <li>③ 10 times each places at 1 sec interval</li> </ul>	
Dust (Operation)	<ol> <li>Sample dust: No. 15 (by JIS-Z8901)</li> <li>15 seconds stir</li> <li>8 times repeat at 1 hour interval</li> </ol>	
Vibration (Non operation)	<ol> <li>5 to 100Hz, 19.6m/s<sup>2</sup></li> <li>1 minute/cycle</li> <li>X, Y, Z directions</li> <li>120 times each directions</li> </ol>	No display malfunctions
Mechanical shock (Non operation)	<ol> <li>539m/s<sup>2</sup>, 11ms</li> <li>±X, ±Y, ±Z directions</li> <li>5 times each directions</li> </ol>	No physical damages

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

#### 7. PRECAUTIONS

#### 7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. **Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!** 

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

#### 7.2 CAUTIONS

\* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 539m/s<sup>2</sup> and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6 N (\$\ophi16mm jig)\$)

7.3 ATTENTIONS 
$$\cancel{!}$$

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ④ The torque for product mounting screws must never exceed 0.294N·m. Higher torque might result in distortion of the bezel.
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ⑤ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ⑦ Do not push or pull the interface connectors while the product is working.
- ③ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ③ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

#### 7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

#### 7.3.3 Characteristics

#### The following items are neither defects nor failures.

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ④ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.

#### 7.3.4 Others

- ① All VCC and GND terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing lamp holder set.
- ④ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NLT for repairing and so on.

#### **REVISION HISTORY**

The inside of latest specifications is revised to the clerical error and the major improvement of previous edition. Only a changed part such as functions, characteristic value and so on that may affect a design of customers, are described especially below.

Edition	Document number	Prepared date		Revision contents and signature	
1st edition	DOD-PP- 1182	Feb. 3, 2014	Revision contents		
cutton	1102	2014	New issue		
			Signature of writer Approved by R. KAWASHIMA	Checked by	Prepared by E. Yoshimura E. YOSHIMURA
