1. Application

This specification applies to color TFT-LCD module, LQ104S1DG31

These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The device listed in these specification sheets was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation (conrrols of aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Confirm "12. Handling Precautions" item when you use the device.

Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a 800 X 3 X 600 dots panel with 262,144 colors by supplying 18 bit data signal (6bit/color), four timing signals and supplying +3.3V/5.0V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

Viewing angle is 6 o'clock direction.

Backlight-driving DC/AC inverter is not built in this module.

3. Outline specification.

Parameter	Specifications	Unit
Display size	26 (10.4") Diagonal	cm
Active area	211.2(H)×158.4(V)	mm
Pixel format	800(H)×600(V)	pixel
	(1 pixel=R+G+B dots)	-
Pixel pitch	0.264(H)×0.264(V)	mm
Pixel configuration	R,G,B vertical stripe	-
Display mode	Normally white	-
Unit outline dimensions *1	243.0(W)×183.8(H)×Max.11.5 (D)	mm
Mass	Max.600	g
Surface treatment	Anti-glare and hard-coating 3H	-

^{*1:} excluding backlight cables.

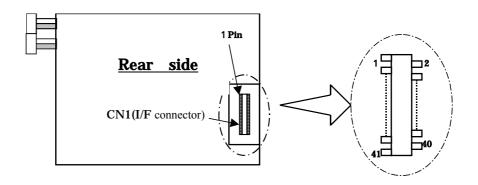

Outline dimensions is shown in Fig.1

7. Backlight driving

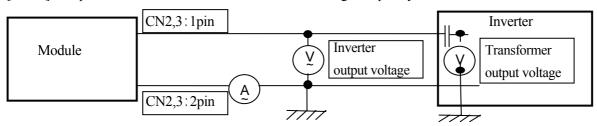

The backlight system is an edge-lighting type with double CCFT (Cold Cathode Fluorescent Tube).

The characteristics of single lamp are shown in the following table.

(It is usually required to measure under the following condition. IL=6.0mA, $Ta=25 \pm 2$, FL=60kHz.)

Parameter	Symbol	Min.	Тур.	Max.	Unit	Remark	
Lamp current	IL	3.0	6.0	6.5	mA rms	[Note1]	
Lamp power consumption	PL	-	2.8	-	W	[Note2]	
Lamp frequency	FL	35	60	70	kHz	[Note3]	
Kick-off voltage	Vs	-	-	1300	V rms	Inverter output	[Note4]
		-	-	(2000)		Transformer output	$Ta=-30^{\circ}C$
						Barast capacitor=12pF	

[Note1] Lamp current is measured with current meter for high frequency as shown below.

[Note2] Referential data per one CCFT by calculation. (I L × VL)

The data don't include loss at inverter. (IL=6.0mArms)

[Note3] Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

[Note4] The open output voltage of the inverter shall be maintained for more than 1s; otherwise the lamp may not be turned on.

[Note5] Lamp is consumables. In the following condition, the lamp life time is 50,000 hour as the reference value and it is not guaranteed in this specification sheet by SHARP.

Above value is applicable when lamp is placed horizontally.

Lamp life time is defined that it applied either or under this condition (Continuous turning on at Ta=25 °C, IL=6.0mA rms)

Brightness becomes 50% of the original value under standard condition.

Kick-off voltage at Ta=-30 °C exceeds maximum value, 1300Vrms.

Lamp life time shortens according to the state of mounting and use.

(Lamp lifetime may vary if lamp is in portrait position due to the change of mercury density inside the lamp.) In case of operating under lower temp environment, the lamp exhaustion is accelerated and the brightness becomes lower.

(Continuous operating for around 1 month under lower temp condition may reduce the brightness to half of the original brightness.)

In case of such usage under lower temp environment, periodical lamp exchange is recommended.

[Note6] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting,flicker, etc.) never occur. when you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Be sure to use a back light power supply with the safety protection circuit such as the detection circuit for the excess voltage, excess current and or electric discharge waveform.

Be sure to use the detect circuit by which one side of the CCFT lamps can be controlled independently. Otherwise, when one side of the CCFT is open, the excess current may possibly be applied to the other side of the lamp.

Recommended inverter is "CXA-0454 (TDK)".

("CXA-P1212B-WJL(TDK)" is also recommended under general temperature condition.)

[Note7] It is required to have the inverter designed so that to allow the impedance deviation of the two CCFT lamps and the capacity deviation of barast capacitor.

[Note8] Under the environment of 10lx or less, miss-lighting delay may occur.

8. Timing Characteristics of input signals

Timing diagrams of input signal are shown in Fig.2.

8-1. Timing characteristics

Pa	rameter	Symbol	Min.	Тур.	Max.	Unit	Remark
Clock	Frequency	1/Tc	35	40.0	42.0	MHz	-

phase differe							
Hsync-Vsync		TVh	0	-	ТН-ТНр	clock	-
phase differe							
Vertical data	start position	TVs	23	23	23	line	-

[Note] In case of lower frequency, the deterioration of display quality, flicker etc.,may be occurred.

8-2. Horizontal display position (Fixed mode)

The horizontal display position is determined by ENAB signal and the input data corresponding to the rising edge of ENAB signal is displayed at the left end of the active area.

Parameter		symbol	Min.	Тур.	Max.	Unit	Remark
Enable	Setup time	Tes	5	-	Tc-10	ns	-
signal Pulse width		Тер	2	800	TH-10	clock	-
Hsync-Enable signal		THe	58	88	170	clock	-
phase differe	ence						

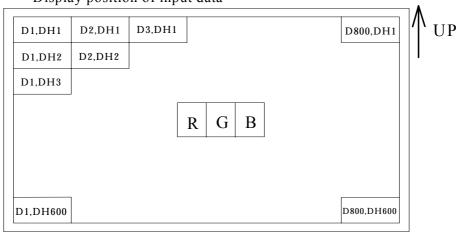

[Note] When ENAB is fixed "Low", the display starts from the data of C88(clock) as shown in Fig.2-1. The vertical display position, TVs is fixed "23" (line).

8-3. Horizontal /Vertical display position (DE mode)

Display start timing is settled in accordance with a rising timing of ENAB signal as shown in Fig.2-2.

8-4. Input Data Signals and Display Position on the screen

Display position of input data

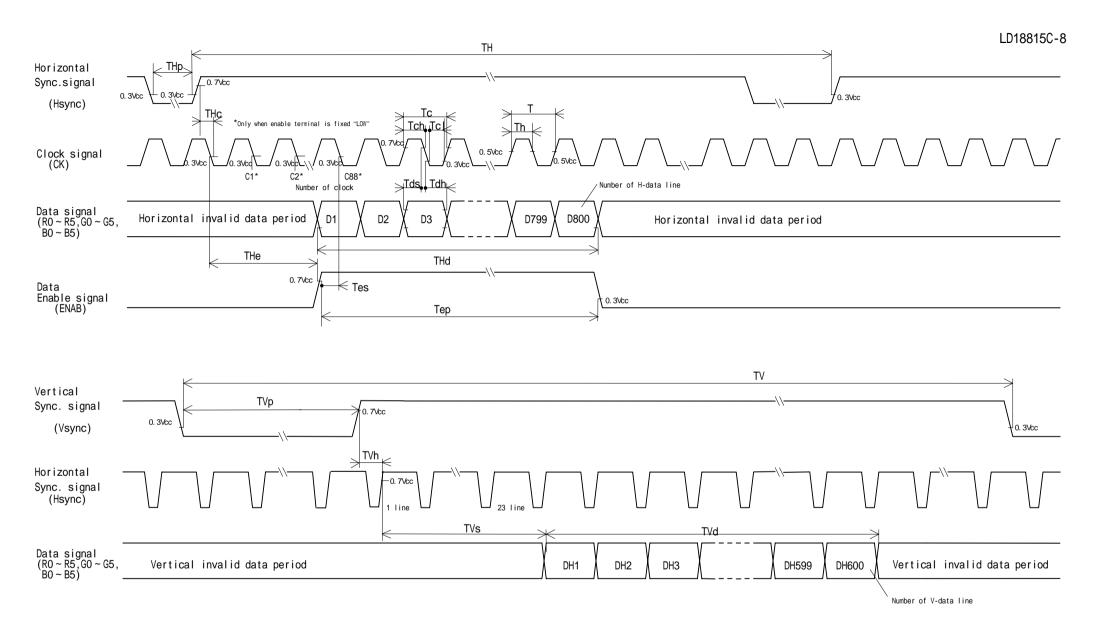

Fig. 2-1 Input signal waveforms (Fixed mode)

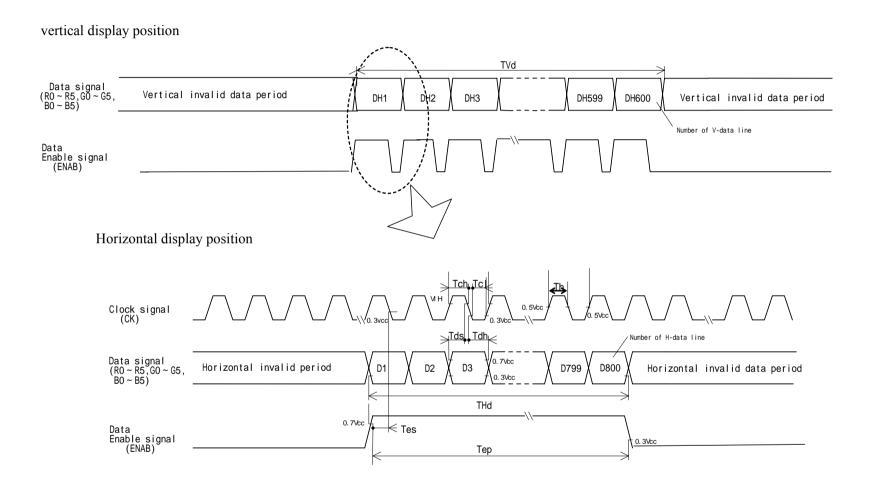

Fig. 2-2 Input signal waveforms (DE mode)

9. Input Signals, Basic Display Colors and Gray Scale of Each Color

Luminance of white		Y_{L1}		280	350	-	cd/m ²	
White Uniformity								[Note5]
		δW		-	-	1.45		

[Note] The measurement shall be executed 30 minutes after lighting at rating. (condition:IL=6.0mA rms)

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3 below.

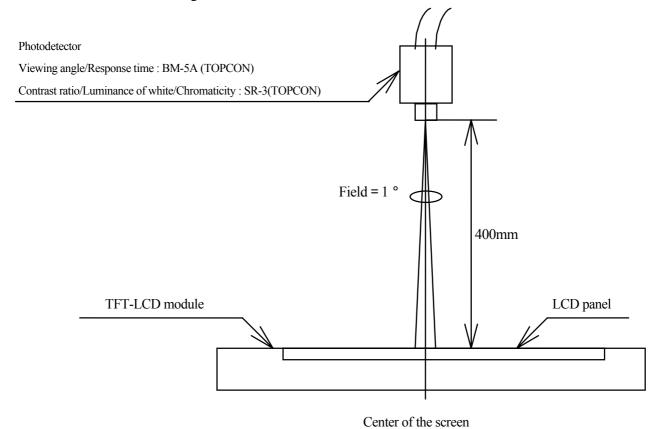

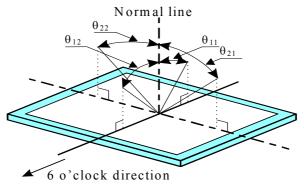

Fig.3 Optical characteristics measurement method

[Note1] Definitions of viewing angle range:

[Note2] Definition of contrast ratio:

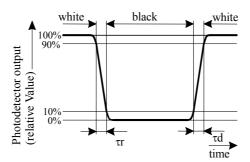

The contrast ratio is defined as the following.

Luminance (brightness) with all pixels white

Luminance (brightness) with all pixels black

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

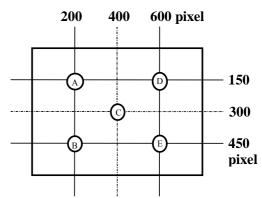

[Note4] This shall be measured at center of the screen.

[Note5] Definition of white uniformity:

White uniformity is defined as the following with five measurements $(A \sim E)$.

11. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

12. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.

Blow away dust on the polarizer with antistatic N₂ blow. It is undesirable to wipe off because a polarizer is sensitive.

It is recommended to peel off softly using the adhesive tape when soil or finger oil is stuck to the polarizer.

When unavoidable, wipe off carefully with a cloth for wiping lenses.

- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling. Observe all other precautionary requirements in handling components.
- h) Since there is a circuit board in the module back, stress is not added at the time of a design assembly. Please make it like. If stress is added, there is a possibility that circuit parts may be damaged.
- Protection film is attached to the module surface to prevent it from being scratched.
 Peel the film off slowly, just before the use, with strict attention to electrostatic charges.
 Blow off 'dust' on the polarizer by using an ionized nitrogen.
- j) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching protective board over the LCD, be careful about the optical interface fringe etc. which degrades display quality.
- k) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD panel is used under such environment.
- 1) Connect GND to 4 place of mounting holes to stabilize against EMI and external noise.
- m) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to electrical shock. When exchange lamps or service, turn off the power without fail.
- n) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- Old cathode fluorescent lamp in LCD panel contains a small amount of mercury, please follow local ordinances or regulations for disposal.
- p) Be careful of a back light lead not to pull by force at the time of the wiring to an inverter, or line processing.
- q) When install LCD modules in the cabinet, please tighten with "torque = 0.294 ± 0.02 N* m (3.0 ± 0.2 kgf* cm)". Be sure to confirm it in the same condition as it is installed in your instrument.
- r) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets inside your eye or mouth by mistake.
- s) Notice: Never dismantle the module, because it will cause failure.
 - Please don't remove the fixed tape, insulating tape etc. that was pasted on the original module.
 - (except for protection film of the panel and the crepe tape(yellow tape) of fixing lamp cable temporarily.)
- t) Be careful when using it for long time with fixed pattern display as it may cause afterimage.
 - (Please use a screen saver etc., in order to avoid an afterimage.)
- u) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- v) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- w)The lamp used for this product is very sensitive to the temperature.

Luminance decreases rapidly when it is used for a long time or repeatedly under the environment of the low temperature or the module is being cooled.

Please avoid the continuous or repeating use of it under such an environment.

It may decrease up to 50% of the initial luminance in about one month under the low temperature environment.

Please consult our company when it is used under the environment like the above mentioned.

13. Packing form

Product countries	JAPAN	CHINA	
Piling number of cartons	6		
Package quantity in one carton	20		
Carton size	486 × 403 × 322		
Total mass of one carton filled with full modules	14Kg		
Packing form is shown	Fig.4		

14.Reliability test items

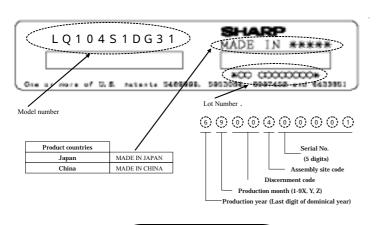

No.	Test item	Conditions	Remark
1	High temperature storage test	Ta=80 240h	
2	Low temperature storage test	Ta=-30 240h	
3	High temperature	Ta=40 ; 95%RH 240h	
	& high humidity operation test	(No condensation)	
4	High temperature operation test	Tp=80 240h	Panel surface
5	Low temperature operation test	Ta=-30 240h	
6	Vibration test	Frequency: 10 ~ 57Hz/Vibration width (one side): 0.153mm	
	(non- operating)	: 57 ~ 500Hz/Gravity: 19.6 m/s ²	
		Sweep time: 11 minutes	
		Test period: 3 hours	
		(1 hour for each direction of X,Y,Z)	
7	Shock test	Max. gravity: 490m/s ²	
	(non- operating)	Pulse width: 11ms, half sine wave	
		Direction: $\pm X, \pm Y, \pm Z$ once for each direction.	
8	ESD test	Human model	
9	EMI	VCCI (Class B)	

[Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state: Temperature: $15 \sim 35$, Humidity: $45 \sim 75\%$, Atmospheric pressure: $86 \sim 106$ kpa)

15.Others

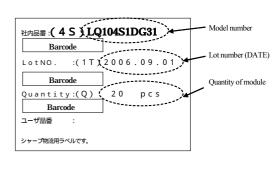

15-1 Lot No. Label:

Internal Use Only

R.C.

15-2 Packing box Label:

R.C. (RoHS Compliance) means these parts have corresponded with the RoHS directive.

15-3 If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.

16. Carton storage condition

Temperature 0 to 40 Humidity 95%RH or less

Reference condition: 20 to 35, 85%RH or less (summer)

: 5 to 15 , 85%RH or less (winter)

• the total storage time (40 $\,$,95%RH) : 240H or less

Sunlight Be sure to shelter a product from the direct sunlight.

Atmosphere Harmful gas, such as acid and alkali which bites electronic components and/or

wires must not be detected.

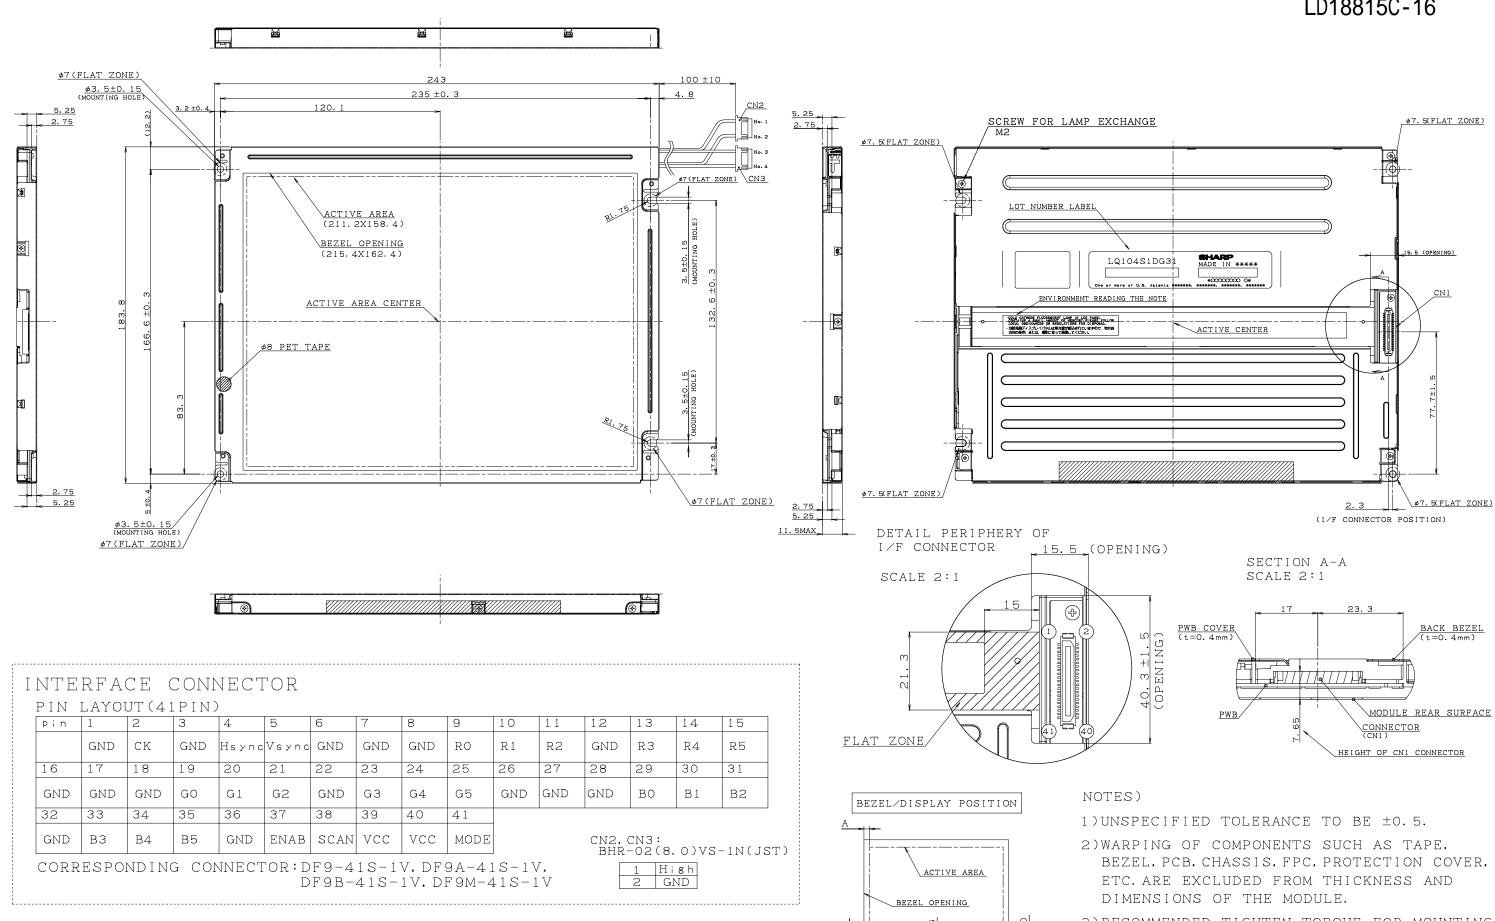

Notes Be sure to put cartons on palette or base, don't put it on floor, and store them with

removing from wall

Please take care of ventilation in storehouse and around cartons, and control

changing temperature is within limits of natural environment

Storage period 1 year
